

DOOR HANDING

The Easiest Part to Buying Door Hardware!

Door handing comes in four different varieties:

Left hand
Left hand reverse

Right hand
Right hand reverse

These determine on which side the key cylinder should be located.

Left hand: hinges on left, opens inward

Left hand reverse: hinges on left, opens outward

Right hand: hinges on right, opens inward

Right hand reverse: hinges on right, opens outward

The handing of doors is always determined from the outside. The figure above is either entering the building from outside, or is entering a room from the hallway.
